

Same NDV. Different structure. Faster decisions.

Measured throughput

Why the layout matters

Synthetic · 128 rows × 14 fields · every field: NDV 8, 128 tokens · reference server: RTX 4090 / JEV-9B / vLLM 0.31.0

2 cold-namespace trials per layout; bars = rows / median elapsed time, dots = trials. Planning and cache fills included. All measured layouts: 100% task accuracy.
